

“Group Theory International” Online Seminar

Mahmood Sohrabi

(Stevens Institute of Technology)

“On the elementary theory of finitely generated nilpotent and polycyclic groups”

Thursday, Feb 14, noon (New York Time)

Abstract:

In this talk we shall present yet another characterization of elementary equivalence of finitely generated nilpotent groups. We shall also discuss some applications to the elementary theory of polycyclic groups.

This is a joint work with Alexei Miasnikov.

Next presentation: **Feb 28, Markus Lohrey (Universität Leipzig, Germany)**
