Assignment 3

I. Shift Cipher.

Given a bijection ϕ :

$$\begin{split} A &\rightarrow 0, B \rightarrow 1, C \rightarrow 2, D \rightarrow 3, E \rightarrow 4, F \rightarrow 5, G \rightarrow 6, H \rightarrow 7, I \rightarrow 8, J \rightarrow 9, K \rightarrow 10, \\ L \rightarrow 11, M \rightarrow 12N \rightarrow 13, O \rightarrow 14, P \rightarrow 15, Q \rightarrow 16, R \rightarrow 17, S \rightarrow 18, T \rightarrow 19, \\ U \rightarrow 20, V \rightarrow 21, W \rightarrow 22, X \rightarrow 23, Y \rightarrow 24, Z \rightarrow 25 \end{split}$$

A plain text (a sequence of letters) $a_1 a_2 \dots a_m$ is mapped into a sequence of numbers $x_1 x_2 \dots x_m$, where $x_i = \phi(a_i) \in \mathbb{Z}_{26}$:

$$a_1 a_2 \dots a_m \to x_1 x_2 \dots x_m$$

Given a key $K \in \mathbb{Z}_{26}$.

Encryption function with the key K:

$$e_K(x) = (x+K)(mod\ 26).$$

Encryption of the sequence:

$$x_1x_2\ldots x_m \to e_K(x_1)e_K(x_2)\ldots e_K(x_m)$$

Message to send over an insecure channel:

$$b_1 b_2 \dots b_m$$
, where $b_i = \phi^{-1}(e_K(x_i))$.

Example 1.

Text: GO Sequence of numbers: 6 14 Key K = 12Encrypted sequence: 18 0 Message to send: SA

Problem 1. Suppose a plain text was encrypted using a Shift Cipher and the following message was sent:

HPHTWWXPPELEXTOYTRSE

Find the key K and decrypt the original text.

II. Affine Cipher.

Given: the bijection ϕ as above.

As above each plain text $a_1 a_2 \dots a_m$ is mapped to a sequence of numbers $x_1 x_2 \dots x_m$, where $x_i = \phi(a_i) \in \mathbb{Z}_{26}$.

Given keys: $a, b \in \mathbb{Z}_{26}$ such that a is relatively prime to 26.

Encryption function with the keys a, b:

$$e(x) = (ax+b)(mod\ 26).$$

Encryption of the sequence:

$$x_1 x_2 \dots x_m \to e(x_1) e(x_2) \dots e(x_m)$$

Message to send over an insecure channel:

$$b_1 b_2 \dots b_m$$
, where $b_i = \phi^{-1}(e(x_i))$.

Example 2.

Text: HOT Sequence of numbers: 7 14 19 Keys: a = 7, b = 3Encrypted sequence: 0 23 6 Message to send: AXG

Problem 2. Suppose a plain text was encrypted using an Affine Cipher with keys a = 7, b = 3 and the following message was sent:

TXXYQHTAZ

Decrypt the original text.

III. RSA type.

Given: the bijection ϕ as above.

As above each plain text $a_1 a_2 \dots a_m$ is mapped to a sequence of numbers $x_1 x_2 \dots x_m$, where $x_i = \phi(a_i) \in \mathbb{Z}_{26}$.

Given keys: primes p, q, n = pq, a number d such that d is relatively prime to k = (p-1)(q-1), a number e such that $ed \equiv 1 \pmod{k}$.

Encryption function with the keys e, n:

$$e(x) = x^e (mod \ n).$$

Encryption of the sequence:

$$x_1x_2\ldots x_m \to e(x_1)e(x_2)\ldots e(x_m)$$

Message to send over an insecure channel (the same as the encrypted message):

$$e(x_1)e(x_2)\ldots e(x_m)$$

Public information: n, eExample 3.

Text: GO Sequence of numbers: 6 14 Keys: p = 5, q = 11, n = 55, k = 40, d = 27, e = 3Encrypted sequence: 51 49 (indeed, $6^3 \equiv 51 \pmod{55}$, $14^3 = 49 \pmod{55}$) Message to send: 51 49

Problem 3. Suppose a plain text was encrypted using the system described above with public information n = 77, e = 43 and the following message was sent:

 $11 \ 0 \ 61 \ 53$

Decrypt the original text.
